

Company profile

Profile

Van Oord operates around the world as a leading contractor for dredging, marine engineering and offshore energy projects (oil, gas and wind), offering innovative solutions to marine challenges. The company operates worldwide in more than fifty countries.

Van Oord is a private company with limited liability and its head office in Rotterdam, the Netherlands. Our employees are committed, entrepreneurial professionals who are passionate about water and technology. They understand that cooperation is crucial to achieving the best possible result. By being open and honest, they build mutual trust and respect.

Van Oord is a family-owned business offering marine solutions of value, both now and in the future. Safety, sustainability and continuity go hand in hand in this respect. Van Oord takes an interest in its value chain, which extends from suppliers to clients.

Mission statement

We are the leading international contractor for dredging, marine engineering and offshore projects (oil, gas and wind). We create innovative, sustainable solutions and safe working conditions in close cooperation with our clients.

Vision

The growing world population needs more space and the demand for energy is rising constantly. The increasing level of world trade requires more and better port facilities; at the same time, climate change is threatening coastal areas. Van Oord provides innovative solutions for these worldwide maritime challenges, both now and in future.

Company values

- marine entrepreneurship
- professionalism and dedication
- passion and ingenuity
- integrity, openness, respect, and team spirit
- care for our people

Sustainability

When working on our projects, we are increasingly confronted by their impact on the environment and the surrounding area. Van Oord believes that sustainability is an important issue. One of our objectives is to minimise or compensate for the impact of our work on people and the environment wherever possible.

Offshore specialists

Van Oord's business unit Offshore is specialized in engineering, procurement and construction (EPC) and has an extensive experience in the offshore oil and gas industry. It carries out projects relating to:

- offshore pipeline installation
- subsea rock installation
- offshore installation (Gravity Based Structures) and SPM (Single Point Mooring) installations

Subsea rock installation

Our high-precision subsea rock installation activities are vital for the stabilisation and protection of offshore pipelines, cables and other installations such as GBSs (Gravity Based Structures) and offshore wind farm foundations. As a market leader in this industry, with more than four decades of experience, our large and modern fleet of DP flexible fallpipe vessels and side stone dumping vessels enables us to provide pre-pipelay and post-pipelay rock installation, scour protection, seabed improvement and ballasting services for offshore structures in water depths of up to 1,500 metres.
